Course Summary

Barry Schmell

Congratulations - you made it! We covered a lot of content in this course, so let's briefly review what you have learned.

Course agenda

In this course, we started with an introduction to Looker and reviewed how to navigate the platform and access its key features for data explorers.

Course agenda

Next, we examined the core analytics concepts in Looker - dimensions, measures, filters, and pivots - and completed a hands-on lab to practice analyzing and visualizing data using these core analytics concepts.
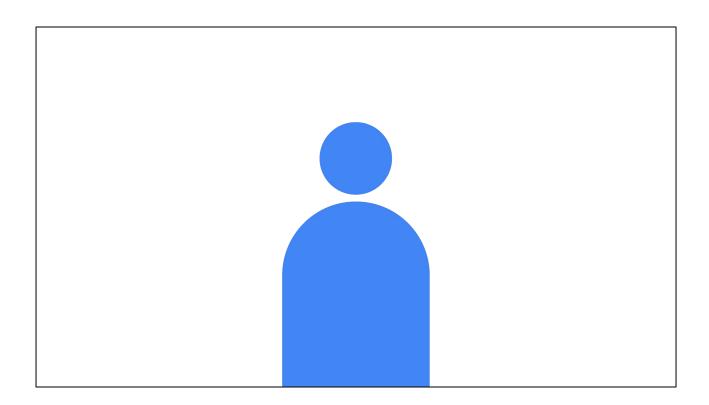

Course agenda

Then, we explored how to use table calculations to instantaneously create new metrics and practiced working with table calculations in another hands-on lab.

Course agenda

We also reviewed how to create, customize, and share single visualization reports called Looks as well as dashboards which combine multiple visualizations.

Course agenda

Last, we discussed how to use folders and boards to share and organize Looker content within a broader team or organization.

You are now ready to explore your own organization's Looker instance and apply what you have learned in this training to analyze, visualize, and share the data with others.

Hope you have fun continuing your journey as a Looker data explorer!
